

# Construction site signaller

🕒 Duration : 45min

FRENCH

ENGLISH

SPANISH

A construction site is an environment where there is a great deal of movement and where workers, pedestrians, and sometimes even the public may be called upon to coexist. In this back-and-forth whirlwind, workers are also exposed to vehicles as well as mobile equipment.

To that end, the risk of accidents is quite present, which is why it is important to properly plan the traffic on construction sites in order to eliminate the simultaneous presence of trucks and people on foot in the same place.

## 🎯 Target audience

This training is intended for all those who play the role of construction site signaller and who direct machinery as well as heavy vehicles on a given work site. In addition, it is also aimed at all drivers, workers, and those responsible for planning the work on the site.

## ☰ Teaching and evaluation methods

The learning method for this online training is based on interactivity, dynamism and self-learning. The training will be done at the pace of the learner and according to his/her availability. Your understanding and skills will be evaluated at the end of each module.

You'll need to correctly answer all the questions in the current module, which will be presented in "true or false" or "multiple choice" questions to continue your progress. If you fail, you'll have to repeat the module.

## 🔑 Legal notice

There are no legal notice associated with this training. No other training or experience is required.

## 📜 Intellectual integrity

Given the seriousness of the approach and the importance of the knowledge acquired through this training, the team of SSTenligne invites you to respect the integrity of the training and its questionnaires.

We suggests you answer to the best of your knowledge, that is, without help and without plagiarism.

You must have an ASP construction card, and in some cases, CCQ competency cards may be required.
